

enabled them to issue a work of the liveliest interest and importance. It should stir many another to like industry. The habits of some twenty-two genera, often of several species under each, are studied, and even their individual idiosyncracies in many cases discovered and related. The illustrations add much to the value of the book, but the inspiring example of faithful work is its chief merit.

Mr. W. F. Kirby of the British Museum has just issued a little book, entitled *Marvels of Ant Life* (London, S. W. Partridge & Co.). Although a compilation and so lacking the spirit of the work of an original observer, it is very well compiled, and in the short space of 174 pages covers sixteen chapters in the separate consideration of ants as architects, agriculturists, mushroom-growers, hunters, honey-pots, cattle-keepers, slaveholders, soldiers, etc., and culls from the abundant but widely scattered literature the best instances that can be given, and which are put together with skill. A general bibliography is appended, in which we miss Forel's extended paper on ants' nests, published in Zurich in 1893, and translated for the Smithsonian Report of 1894.

Chancellor W. J. Holland's *Butterfly Book* (New York, Doubleday and McClure Co.), is a "popular guide" to North American butterflies, and has its special value from illustrating in color some five hundred species with 750 figures. They are "three-color prints," and are astonishingly accurate reproductions from nature to the minutest detail, surpassing the best chromolithographs and only occasionally falling short, where the registry is imperfect or the original specimens are not altogether satisfactory; Nature, not a draughtsman, does the work for color as well as pattern. The work will add greatly to the interest of the butterfly collector, for it is published at the extraordinarily low price of three dollars, and figures most of our species north of Mexico. We are disappointed to find the life histories ignored.

STATE ENTOMOLOGIST OF NEW YORK.—The Country Gentleman states that the regents of the University of New York have appointed Ephraim Porter Felt, state entomologist, a previous appointment by the governor having proved to be without authority in law.
